SUMMARY

I am a quality engineer who has discovered a passion for programming. For the last year I have devoted time to learning, and I immediately try to translate the acquired knowledge into practice by creating projects, which allows me to perfect my acquired skills. As a Quality Engineer, I learned teamwork, problem solving, independence and contact with a foreign client. I am looking for a job as a Frontend Developer to deepen my knowledge in this area together with other developers.

PROJECTS

• League of legends champions app

This is a project that I am currently working on. Created by using React and Typescript technology. Hero data for the app is fetched from the API. Heroes can be filtered by role or difficulty level. For each of the 163 heroes is created a separate view, in which there are such functionalities as skins sliders, spells and descriptions for each of the heroes.

• Online store simulation

Mobile store design created in such technologies as HTML, CSS and JavaScript. We can filter phones according to the selected category, add to the cart products with regular price and promotional products.

• Travel List App

Travel list is an application that will help you pack your dream trip. Project made with React. The application has such functionalities as filtering items, adding/removing and counting packed items.
